

KAIROS COMPLETES HEAVILY OVERSUBSCRIBED \$1.71M SHARE PLACEMENT TO FAST-TRACK PILBARA GOLD EXPLORATION

Exploration to commence shortly at key locations targeting conglomerate-hosted gold potential

Highlights

- **Heavily oversubscribed \$1.71M share placement now completed with 90M shares issued with a free 1-for-1 attaching option.**
- **Funds to be used to fast-track upcoming exploration programs across Kairos' extensive West, Central and East Pilbara tenement portfolio for conglomerate-hosted gold potential.**
- **An initial recently completed field review has confirmed the presence of prospective lower Fortescue Group Rocks, including the basal Mount Roe Basalt, over at least ~100km of strike within Kairos' extensive tenement package.**
- **The target stratigraphy is considered to be the same as that which hosts the recent gold discoveries announced by Novo Resources (TSX-V: NVO), which has reported a significant new "Witwatersrand style" conglomerate-hosted gold discovery at its joint venture project with Artemis Resources (ASX: ARV) in the West Pilbara.**
- **Quad bike and/or helicopter-assisted stream sediment and rock chip sampling programs to commence across key locations within the coming weeks. Assays are also awaited from recently completed surface sampling programs.**

Kairos Minerals Ltd (ASX: KAI; "Kairos" or "the Company") is pleased to advise that it has completed the recently announced \$1.71 million share placement. The placement, comprising the issue 90 million new shares at an issue price of 1.9c to sophisticated and professional investors, was heavily oversubscribed.

The shares have now been issued and an Appendix 3B and Section 708 cleansing notice is attached to this announcement. The new shares will be issued with a 1-for-1 free attaching option exercisable at 2.6c by 31 December 2019 subject to shareholder approval.

The placement was undertaken to sophisticated wholesale investor clients of CPS Capital and Patersons Securities, and has been completed within the Company's existing 15% placement capacity under ASX Listing Rule 7.1 and 7.1A.

In addition to progressing activities at the Company's 100%-owned Roe Hills Project, located 120km south-east of Kalgoorlie in WA, the proceeds will also be used to fast-track upcoming exploration programs targeting the conglomerate-hosted gold potential across the Company's extensive Pilbara gold-lithium tenement package, as outlined in recent announcements.

The identification of the gold potential on its Pilbara tenements is an important and exciting new development for the Company which will be progressed as a priority over the coming weeks.

Background

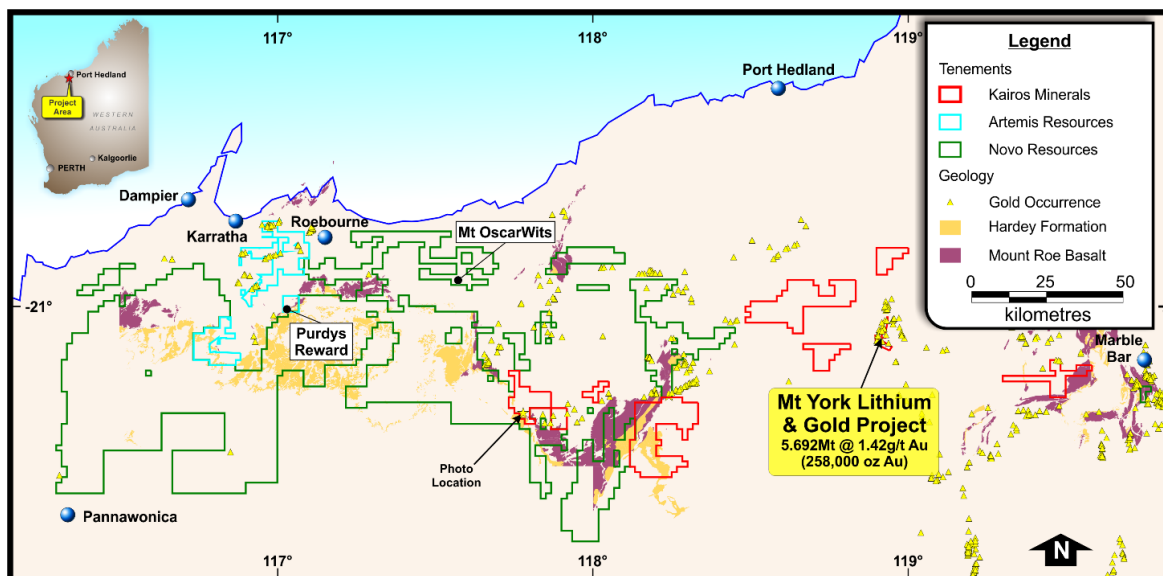

As announced yesterday, Kairos has completed an initial field assessment of its extensive Pilbara lithium-gold tenement portfolio in Western Australia (see Figure 1). This review has both confirmed and enhanced its prospectivity for Paleo-Placer “Witwatersrand-style” conglomerate-hosted gold mineralisation similar to the discoveries reported recently in the region by Novo Resources Limited (TSX-V: NVO) and Artemis Resources (ASX: ARV).

Kairos holds 1,158 square kilometres of tenure in this region, which has recently experienced a significant increase in exploration activity as a result of the announcement of a new conglomerate-hosted gold discovery by Novo and Artemis. The recent field assessment, along with results from a review of available geological information for Kairos’ tenements, has highlighted the presence of at least ~100 strike kilometres of prospective lower Fortescue Group rocks including both the base of the Hardey Formation and the basal sequence of the Mount Roe Basalt.

Gold has been mined from conglomerates associated with both of these horizons historically at several locations in the Pilbara, including at Marble Bar and Nullagine. No recorded detailed sampling for gold has been undertaken along these horizons within Kairos’ tenements, although significant alluvial gold nugget occurrences are reported in the historical record in close proximity at several locations including Croydon, Friendly Creek and Marble Bar. Significant historical gold production from strike (stratigraphical) equivalent conglomerate host rocks is well documented from Marble Bar and Nullagine (Refer: Hickman 1983; Geology of the Pilbara Block and its Environs, GSWA Bulletin 127)

The Novo/Artemis discoveries, including a significant quantity of gold nuggets found at surface, are associated with a regionally extensive geological formation known as the Fortescue Group of rocks including the lower Hardey Formation and the Mount Roe Basalt. Importantly, the presence of these sequences has now been verified extensively throughout Kairos’ tenements.

In light of the positive results from the field assessment, Kairos has decided to fast-track further field evaluation including stream sediment and rock chip sampling programs, which are set to commence within the coming weeks. Because of the nature of the terrain, this initial sampling program will be undertaken with the use of quad bikes and/or helicopter assistance.

Kairos cautions investors that further work is required to confirm the gold bearing nature of the prospective conglomerate sequences which have been identified within Kairos Minerals tenure.

ENDS**About Kairos Minerals**

Kairos Minerals (ASX: KAI) is a diversified West Australian-based exploration company which is focused on the exploration and development of two key project hubs located in WA's premier mining districts.

The 100%-owned Mt York Gold-Lithium Project is located ~100km south of Port Hedland in the world-class Pilgangoora district. Since acquiring the project in early 2016, Kairos has rapidly established a 258,000oz JORC 2012 compliant Mineral Resource inventory at Mt York by re-evaluating the known resources from the historical Lynas Find gold mine, which produced over 125,000oz between 1994 and 1998.

The 100%-owned Roe Hills Project, located 120km east of Kalgoorlie in WA's Eastern Goldfields, comprises an extensive tenement portfolio which is highly prospective for gold, nickel and cobalt discoveries. Kairos' tenure adjoins the emerging Lake Roe gold discovery, owned by Breaker Resources (ASX: BRB).

Kairos has completed maiden drilling programs across both projects over the past six months, delivering impressive results which have highlighted the significant potential of both projects to deliver significant new discoveries and host economic mineral deposits.

Kairos also holds a dominant 1,158.7km² lithium exploration footprint in the Pilbara region including the highly prospective Mt York and Wodgina east projects.

Kairos has been well recognised for its industry leading technical team that includes its Chairman Terry Topping (Taipan Resources NL, Cauldron Energy Ltd and Orinoco Gold Ltd), Technical Director Neil Hutchison (Poseidon Nickel, Jubilee Mines), Technical Manager Steve Vallance (WMC, ACM, Jubilee Mines, Xstrata, Kagara, LionOre), and consulting specialists Dr Robin Hill, Sarah Dowling, Dr Nigel Brand, Adrian Black and Bill Amman.
